

AMGEO Process Documentation

Process Overview

- **Process Name:** AMGEO
- **Process Type:** Trade Affirmation
- **Primary Purpose:** Match trades between bank and counterparty
- **External System:** DTCC

Batch Job Details

- **Job Name:** TLE-AMGEO-DAILY
- **Frequency:** Every 10 minutes
- **Primary Server:** dev117
- **Server Type:** Unix
- **Purpose:** Pick eligible trades for AMGEO processing

File Details

Outbound Files

- **File Pattern:** outbound_trade_details.txt
- **Primary Location:**
 - Server: dev117
 - Directory: /home/outbound
- **Secondary Location:**
 - Server: dev89
 - Directory: /home/outbound

Inbound Files

- **File Pattern:** matched_trade_details.txt
- **Primary Location:**
 - Server: dev89
 - Directory: /home/inbound
- **Secondary Location:**
 - Server: dev117

- Directory: /home/inbound

System Components

CSDS Process

- **Host Server:** dev89
- **Primary Function:** File transmission to DTCC
- **Process Type:** File transfer service

Workflow Steps

1. TLE-AMGEO-DAILY batch identifies eligible trades
2. Batch creates outbound_trade_details.txt on dev117
3. File transferred via SFTP to dev89
4. CSDS process sends file to DTCC
5. DTCC performs trade matching
6. DTCC returns matched_trade_details.txt to dev89
7. File transferred via SFTP to dev117
8. Batch processes matched file to create new trade

Server Infrastructure

Server: dev117

- **Type:** Unix
- **Role:** Primary batch processing
- **Key Directories:**
 - /home/outbound (outbound files)
 - /home/inbound (inbound files)

Server: dev89

- **Type:** VM
- **Role:** CSDS processing and DTCC interface
- **Key Directories:**
 - /home/outbound (outbound files)
 - /home/inbound (inbound files)
